Mountain Weather Forecast

Brecon Beacons National Park

Forecast valid from 00:00 on Monday 18 Jan 2021 until 23:59 on Tuesday 19 Jan 2021

Forecast Issued on Sunday 17 Jan 2021 at 16:31

Confidence: High confidence for an unsettled week ahead and low confidence on where the frontal rainband will be located meaning quite a lot of uncertainty for the Brecon Beacons, however indicators are for a very wet spell from late Monday to Thursday with some local flooding likely.

Headline for Monday 18 Jan 2021: A cloudy morning for the Brecon Beacons, some brightness possible before rain moves across the area later.

Mountain weather hazards on Monday 18 Jan 2021

Blizzards No Likelihood	**Heavy Snow** No Likelihood	**Storm force winds** No Likelihood
Gales Low Likelihood	**Severe chill effect** Low Likelihood	**Poor visibility** Medium Likelihood
Thunderstorms No Likelihood	**Heavy persistent rain** No Likelihood	**Strong sunlight** No Likelihood

Precipitation probability							
10%	10%	30%	30%	30%	60%	60%	80%

Forecast for Monday 18 Jan 2021

Weather: Cloudy overnight with outbreaks of drizzle and rain, this continuing during the morning. Quite a dull day with lots of low cloud around and poor visibility at times. Perhaps drier for a time late morning especially in the east but low cloud filling in again later as a band of rain moves east across the area in the afternoon, rain will become quite persistent and heavy in the afternoon and evening.

Chance of cloud free mountain/hill tops above 600m: 60% chance in the morning but as cloud lowers and thicken in outbreaks of drizzle and rain this will reduce to 10%.

Visibility: Good during the morning becoming moderate in the afternoon with cloud bases lowering to 3-400m and becoming extensive especially in the west. Visibility becoming poor in the evening as heavy rain moves across the area. Cloud bases slightly higher in the east and a few sunny intervals are possible in the east in the morning.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Some strong gusts around the summits in the late afternoon, fresh winds will give a significant wind chill effect and freezing level will lift above all summits with some thawing snowpack.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
15:00 on Sun 17 Jan 2021	0.2mm	13.8mm	13.8mm

Forecast for Tuesday 19 Jan 2021

Weather: A wet and cloudy day in store as persistent rain is expected throughout the day, this will be rain or at all levels. There may be a few drier spells on peaks in the east depending on the exact location of the rain band however there is uncertainty around this.

Maximum wind: Mainly southwesterly 30-35mph with gusts 45-50mph, stronger gusts likely on the summits.

Chance of cloud free mountain/hill tops above 600m: 30% or less, any clearance is more likely around easterly tops.

Visibility: Generally poor or very poor with extensive low cloud from 3-400m upwards. Perhaps the bases will be 500m in the east. Difficult navigation is likely in persistent rain.

Temperature: **Valleys:** Around 7 Celsius.
At 600m: Plus 5 Celsius.
Freezing level: Above the summits
